

# Assignment 4

**Aim:** Design an interface prototype for selected product/system.

**Content:**

As soon as the user opens the application for the first time, some basic information is gathered in order to tailor the content to the users preference, this information is somehow retained locally to safeguard users privacy. This information is also retained till the next visit by the user. This information can be very easily edited by the user.

The user does not have to keep checking the application for important notifications updates and circulars, the application reminds the users through notifications. For example, the notification when results are declared
